

MAGGIE

Measurement and Analysis of the Global Grid and Internet End-to-end performance

**Hands on
Workshop
April 4th,
5.00 pm**

(Perl)

Perl is a general-purpose programming language originally developed for text manipulation and now used for a wide range of tasks including system administration, web development, network programming, GUI development, and more.

The language is intended to be practical (easy to use, efficient, complete) rather than beautiful (tiny, elegant, minimal). Its major features include support for multiple programming paradigms (procedural, object-oriented, and functional styles), automatic memory management, built-in support for text processing, and a large collection of third-party modules.

Mr. Adnan Iqbal a Ph.D. candidate shall be conducting a hands on workshop to introduce 'perl' to the research assistants who have recently joined us. Students (from NIIT) who may be interested in the activities of MAGGIE are welcome to join us. We shall introduce the on-going projects and discuss future project plans. Later we shall conduct the workshop to introduce the basics of perl scripts.

**LOGO DESIGN
COMPETITION**

We invite all students at NIIT to design a logo (on voluntary basis) for MAGGIE. All interested artists are encouraged to contact me for further details.
